

Open Internet Explorer. In order to use InPrivate Browsing (Incognito), you'll need Internet Explorer 8 or later. If you're using Windows 7 or later, you're automatically using a new enough version.

Click the Gear button or the Tools menu and select "InPrivate Browsing". If you don't see either, press Alt and click the Tools menu that appears. This will open a new In Private window.

- You can also press Ctrl + Shift + P.
